camos makes more out of SAP® ERP

You need a high-performance sales configurator for your complex products? You maintain the data for materials and prices, perhaps also the associated knowledge and models, within SAP® camos provides the suitable solution for precisely that: camos Configurator and the certified SAP®-integration, camos Connect SAP.

camos Connect SAP – the certified SAP®-interface

camos Connect SAP provides ...

- diverting and migrating SAP®-associated knowledge
- searching, reading and maintaining of materials
- verified quotations and orders handed over to SAP®
- more than 100 standardised and XI-capable integration modules for nearly all relevant functions and data in the SAP® modules SD, MM, PP, PS, CO, FI, QM
- release capability and upgrade compatibility to SAP® versions
- synchronised and unsynchronised communication
- effective mapping tool
- standardised and certified interfaces

Benefits of camos Connect SAP

- bi-directional conjunction of SAP® with camos Configurator, camos Sales Center and camos Quotation
- use of SAP® associated knowledge in camos Configurator
- redundancies are avoided by using common data base
- partially automated eradication of complete processes
- minimum customising effort by use of a certified standard interface
- the diverted SAP® associated knowledge can be used and furthermore edited within camos Configurator
- simple administration

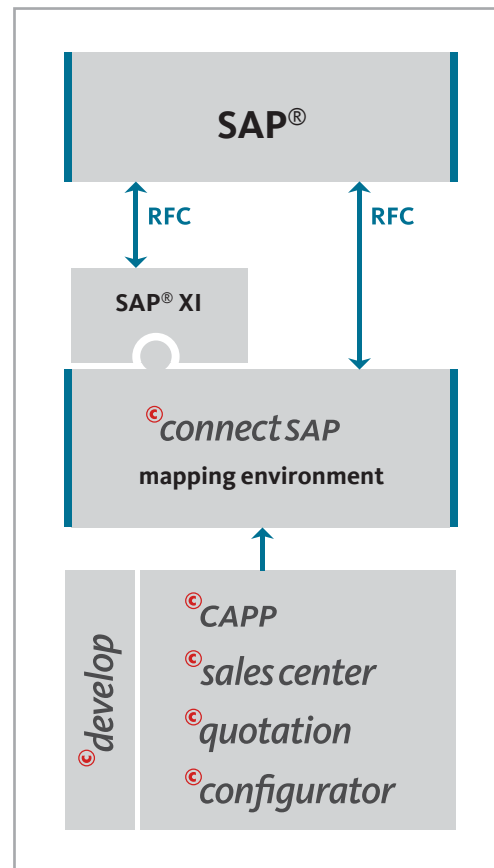

About camos Connect SAP

Functional operation

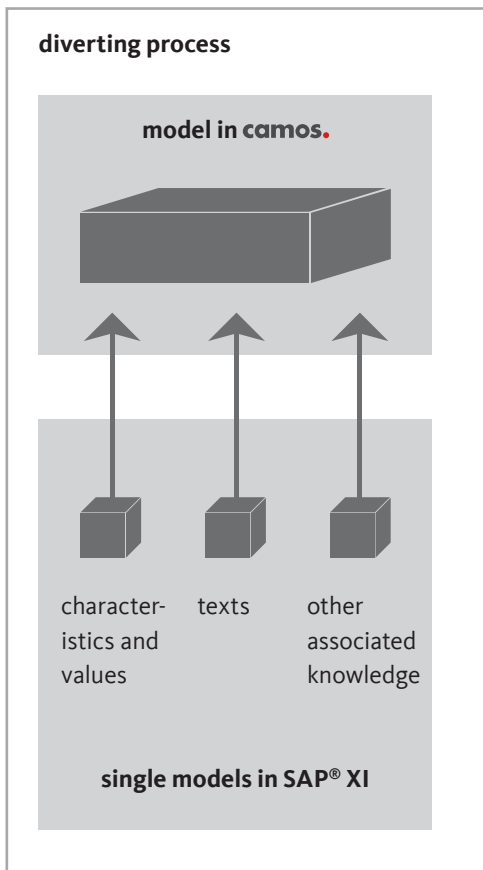

camos Connect SAP combines the object-oriented structure of camos applications with SAP®. This is achieved through a SAP® compliant representation of the relevant object data in XML structures. Through standardised and/or custom designed individual integration modules, the requisite information is accessed or recorded in SAP®. The back transfer of the results is taken care of by camos Connect SAP in the camos object structures.

Using SAP® associated knowledge

The associated knowledge is derived from SAP® and imported into multi-level and structured camos models. This import into the camos knowledge base is supported by a high-performance mapping tool. Characteristics, values and associated knowledge can be taken from SAP® and illustrated on the objects, characteristics and rules in camos. Models from SAP® which are connected to individual material numbers can be transferred to an overall model. Thus, a need-based configuration is made possible.

Using SAP® associated knowledge in camos.

Benefits of using SAP® associated knowledge in camos

- high transparency and easy maintenance through well structured, object oriented associated knowledge in camos
- enlargement of the SAP® associated knowledge with sales relevant knowledge
- product configurator can also be used offline by customers
- simple and easy change management through separation of model and movement data
- lean models and clear associated knowledge through rules, loop constructions and local variables
- short project running times due to fast migration to camos Configurator
- need-based configuration through fusion of several SAP® models in a camos model

camos Connect SAP connects SAP® ERP with the product configurator of camos.
